Individual and Family Resiliency Factors

1. Good physical and mental health: The good health of both children and parents is a key to successful growth.\textsuperscript{146} Good health is associated with fewer behavioral and social problems as well as higher cognitive functioning and learning ability\textsuperscript{147,148} — factors that can significantly reduce involvement in violence.

Parents who have good mental health are better able to nurture and care for their children. For children, good mental health fosters healthy development. For example, recent brain research confirms that if trauma, stress, and early onset mental health conditions are recognized and addressed during the first few years of life, structural and functional changes in the brain that would otherwise compromise a child's success and self-sufficiency can be avoided or reversed.\textsuperscript{149} Specific mental health interventions in early childhood can lead to positive outcomes, including improved school readiness, lower utilization of special education, higher educational achievements, lower rates of criminal behavior, reduced emergency room visits, decreased rates of child abuse, decreased maternal substance abuse, lower welfare usage, and higher rates of employment.\textsuperscript{150}

2. Positive attachments and relationships: Children show significantly better cognitive and language skills, as well as positive social and emotional development, when they are cared for by adults who are attentive to their needs and who interact with them in encouraging and affectionate ways.\textsuperscript{151,152} The absence of such connections early on can harm a child's ability to develop normally. When children have secure attachments early in life, they tend to have better development, social interactions, and academic achievement.\textsuperscript{153}

The attachment and bonding process during infancy is the foundation upon which future relationships and interpersonal skills are based.\textsuperscript{154} Attachment between an infant and caregiver is fundamentally important to helping develop skills such as cooperation, empathy, and negotiation, all of which help in developing positive and healthy relationships later in life. In addition, attachment to parents, parental supervision, and consistent discipline have been found to be the most important family protective factors in preventing delinquency in high-risk youth.\textsuperscript{155,156}
3. Emotional competence: When children can understand and regulate their emotions, exercise self-discipline, and develop impulse-control, judgment, and coping mechanisms, they can better deal with aggressive or violent experiences without negative effects.

In order for young children to learn how to regulate their behaviors and emotions, they need to experience healthy basic interaction, such as eye contact, smiling, and attentiveness, with their caregivers. They also need to see healthy and appropriate behaviors, such as open and positive communication, consistent discipline, and problem solving, modeled by the adults around them.159

4. Cognitive competence: Cognitive competence includes children’s oral, written, reasoning, and problem solving skills, as well as their creative expression and ability to learn. Cognitive skills developed during the early years of life lay the foundation for later educational success and academic achievement,160,161 factors that are highly protective against involvement in violence.162,163

5. Self-esteem: Self-esteem, including mastery of skills, participation in decision-making, and a sense of worth of self and others, is a critically important part of healthy child development. Children who are valued and empowered develop more positively and have a greater sense of self-esteem and success in life.164 One of the first and most influential resiliency studies, conducted by Emmy Werner, found that all resilient children had at least one person who unconditionally accepted them “as they were.”165 In addition, giving children as young as 3 or 4 the opportunity to plan and to have a say in their lives helps them to develop skills and attitudes that are protective over a life span.166 These decision-making and planning opportunities are as important for young children as they are for adolescents.

Community and Structural Resiliency Factors
6. Community networks and leadership: Strong social networks and connections correspond with significant increases in physical and mental health, academic achievement, and local economic development, as well as lower rates of homicide, suicide, and alcohol and drug abuse.167,168 For example, one study showed that children were mentally and physically healthier in neighborhoods in which adults talked to each other.169

Children who are valued and empowered develop more positively and have a greater sense of self-esteem and success in life.
Participation in cooperative networks fosters mutual trust and increases community members’ willingness to intervene in the supervision of children, participate in community-building activities, and maintain public order. Participation also increases supportive relationships, such as sharing, reciprocity, and recognition that the needs of others are the needs of all — all of which are factors that can increase the health and well-being of young children.\textsuperscript{170,171} Such networks also produce and enforce social sanctions and controls to diminish negative behavior and reduce the incidence of crime, juvenile delinquency, and access to firearms within communities.\textsuperscript{172,173}

Community stability, or a community’s ability to maintain its members, is also important in ensuring family stability and promoting positive child development. Enduring relationships within communities are indicative of a strong and vital community that values and has the resources to invest in its members — features that are very important to families and young children.\textsuperscript{174} Also, when a community invests in the development of its people and these people remain in the community, they are in a position to contribute positively to the community and further build its strengths.

Strong civic leadership unifies community members and promotes a sense of shared identity, which can help in resisting threats to community well-being. Civic leaders can advocate for positive community norms, influence individual and group behaviors, and facilitate connections between organizations, communities, individuals, and families. Leaders can advocate for policies that support children and families.

7. Financial resources: Communities with adequate financial resources are often better able to promote and sustain the well-being of children and families, even when they face serious risks. Measures of adequate financial resources include high rates of employment, home ownership, and local ownership and control of businesses and assets, as well as living wage jobs and financial institutions that support the efforts of community members. Additional resources include the provision of welfare, housing vouchers, food stamps, cash supplements, and health insurance, as well as job creation and skills training to promote individual capital and sustained self-reliance among community members. For example, research involving premature and low birthweight babies, as well as infants with in utero cocaine exposure, has shown that being reared in a socioeconomically advantaged environment can reduce the harm to children’s health and cognitive development.\textsuperscript{175,176}
8. **Empowerment and decision-making avenues:** People need timely access to information about events and decisions that affect them and their children. Giving parents and other community members a voice in decision-making increases their sense of empowerment and investment in the community and fosters a greater sense of connectedness.\textsuperscript{177} Parents are in a position to become leading advocates for their children’s well-being. Such advocacy can have an important impact on local and state decisions that affect children.

9. **Community facilities:** Parks, recreation centers, and community centers are places where families can connect and children can engage in activities that contribute to positive development. They also provide places where children can engage in developmentally appropriate play and interactions. Without these, families are less likely to build the relationships and common identity that lead to strong community networks. Many studies have shown that the healthiest American communities — nice places to raise children with good schools, responsive local governments, and a steady economy — typically have large and stable public institutions at their core.\textsuperscript{178}

10. **Health, education, and social systems:** Children and families need easy-to-access systems that support physical, emotional, cognitive, and spiritual health, such as medical and mental health facilities, learning institutions, and faith or spiritual organizations. For children, these resources are the foundation for healthy development. More broadly, systems that support well-being promote individual as well as community health over a lifetime.
Given the complexity of issues, policies, and systems that affect children and their families, successful violence prevention requires an action plan that coordinates, supports, and strengthens a range of efforts. Because the cost of delay is too high in terms of risk, pain, suffering, and premature death, the focus of any approach must be on addressing problems before symptoms occur. This approach is called primary prevention. It emphasizes community-wide or 'environmental' outcomes given the systemic roots of the problem.

Fifteen recommendations are delineated in the following pages for consideration as part of an integrated approach to address local needs, build on community efforts, and strengthen the broader policies and systems that impact young children and families. They are comprehensive by design, addressing multiple risk factors while fostering a range of resiliency factors. Each recommendation includes a set of activities according to the six levels of the Spectrum of Prevention, as described previously and reiterated below.

| 1 | Strengthening Individual Knowledge & Skills |
| 2 | Promoting Community Education |
| 3 | Educating Providers |
| 4 | Fostering Coalitions & Networks |
| 5 | Changing Organizational Practices |
| 6 | Influencing Policy & Legislation |
The activities are not exhaustive but rather recommend some important and promising efforts. Together they reinforce the value of working at different levels simultaneously to achieve significant outcomes for children and families. Since many valuable efforts are already underway in communities, a strategic approach examines how these efforts can strengthen and add value to each other and what other efforts may be necessary. Each of the 15 recommendations is illuminated by case studies of successful approaches. Additional resources on each recommendation can be found in Appendix B.

This solution-oriented approach requires a complementary model of evaluation. Comprehensive approaches are more difficult to measure than individual programs and some desired outcomes may take years to achieve. In addition to the efficacy of individual elements, there is a need to measure the ways in which each element contributes to the overall, comprehensive approach. For example, in *Never Too Early, Never Too Late to Prevent Youth Violence*, California’s Little Hoover Commission recommended a tiered evaluation approach that would rigorously evaluate new and unproved strategies, while programs known to be effective would be measured for effective implementation and responsible management. Given the challenges to evaluation, the wisdom of local practitioners should also be considered in determining local program outcomes.
Raising children is hard work and parents often need help. Caregivers who are supported, empowered, and successful in other areas of life make better parents and are more able to raise healthy children. Effective family support programs are vital to increasing the ability of parents to nurture their children and ensure their optimal physical, emotional, social, and cognitive development.

**INDIVIDUAL:** Provide caregivers with information about child development and teach them stress management, problem solving and boundary setting skills, and positive communication and discipline techniques.

**COMMUNITY:** Ensure that new parents are aware of respite care and support groups to help reduce parenting-related anxiety and stress.

**PROVIDERS:** Build providers’ capacity to develop and provide essential information and resources, respite care, and other supportive services for new parents.

**NETWORKS:** Partner with local businesses to promote family-friendly childcare policies for employees with young children such as providing vouchers or subsidies for care and on-site, emergency, and round-the-clock childcare for parents who work evening and other non-traditional hours.

**ORGANIZATIONAL:** Promote work-life balance for all employees, including part-time and low-wage workers, and institute family-friendly policies such as flexible work hours, compressed work weeks, telecommuting, on-site childcare, paid parental and medical leave, and family health insurance in all workplaces.

**POLICY:** Increase funding and enrollment in state and federal family support programs such as the family and medical leave act, the per-child tax credit, and the food stamp program, especially among cultural or linguistic minority groups.

---

**CASE STUDY**

**Parents as Teachers (PAT)**

This award-winning international family education and support program, which begins prenatally and extends to age 5, is based on the principles that all families have strengths and parents are the experts on their children. The program’s main goal is to help families lay a strong foundation for children’s success in school and life. PAT’s main components are: 1) personal home visits by certified parent educators to educate parents on developmentally appropriate expectations and parent-child learning activities; 2) group meetings for parents to enhance their knowledge, share experiences, and discuss common successes or concerns about their children’s behavior and development; 3) screening to identify whether children are developing on target; 4) connections with community resources to link parents to services beyond PAT’s scope. Independent evaluations show that children in PAT are significantly more advanced in language, social development, problem solving, and other cognitive abilities than comparison children. PAT children also score higher on kindergarten readiness tests and on standardized measures of achievement in early grades. PAT parents are more involved in their children’s schooling, read more to their children, and are more confident in their parenting role. For more information, contact PAT National Offices at (314) 432-4330 or visit www.patnc.org.

**FIRST STEPS**

**Provide families with services and supports to foster health and empowerment.**
Recognize poverty as a significant risk factor and take steps to minimize its impact.

Lack of economic opportunity and resources create a strain on families and can affect children’s emotional, social, cognitive, and physical development. Poverty restricts access to food, safe housing, and other health and social services. It can also increase parental stress and children’s risk of exposure to environmental toxins, alcohol and other drugs, abuse, neglect, and violence in the home or community. Eliminating poverty is long-term, and steps must be taken to minimize its impact. These include increasing earning potential and ‘living incomes’ and strengthening safety net programs and support for low-income workers, such as the Earned Income Tax Credit, food stamps, subsidized housing, and cash grants.

1. **INDIVIDUAL:** Provide job training and skill building such as resume writing, interviewing, and computer literacy classes for parents, and incorporate such training into adult literacy, family support, and community centers.

2. **COMMUNITY:** Increase public understanding of the value and range of options available for living wages through strategies such as targeted living wage subsidies.

3. **PROVIDERS:** Work with local community colleges and employment training programs to ensure that they offer relevant job training and career advancement opportunities, especially for parents and caregivers.

4. **NETWORKS:** Engage existing networks and coalitions in supporting and expanding safety net programs such as WIC, food stamp, Medicaid, CHIP, and Early Head Start.

5. **ORGANIZATIONAL:** Encourage loans and tax incentives for small business owners in the local community and promote increased investment in community enterprises.

6. **POLICY:** Advocate for a per-child tax credit for all families that does not change if parents enter the workforce and for the provision of non-cash benefits such as childcare subsidies, food stamps, and housing and transportation vouchers to low-income families with young children.

**CASE STUDY**

**The New Hope Project**

This Milwaukee-based program for low-income people was implemented by a community organization between 1994 and 1998. The program helped reduce poverty and improve family functioning, financial security, and the well-being of children. It offered direct assistance in finding and keeping jobs as well as in overcoming barriers that often affect low-income families’ ability to work their way out of poverty. The program offered: 1) an income supplement to raise the participants’ income to poverty level; 2) affordable health insurance; 3) childcare subsidies; and 4) paid community service jobs for those who did not find employment. Evaluation of the program found that it had more impact on participants who were not already employed full-time at the start of the program than on those who were already employed. Participants were more likely to gain employment when they were in the program, had higher work-related income and income above the federal poverty level, better housing, fewer unmet medical needs, and were less worried about medical care and finances. Also, male children of program participants were more likely to report better parental relationships, do well in school, have better classroom skills, fewer behavior problems, and higher expectations of attending college and getting high prestige jobs. This program was chosen as a Proven and Promising Program by the Promising Practices Network. Contact (414) 267-6020 or www.promisingpractices.net.
Experiencing neglect and abuse and witnessing violence put young children at significant risk for developmental failures, emotional disturbance, and additional victimization or perpetration of violence later in life. Further, the effects of neglect, abuse, or witnessing violence often go unnoticed. Children should receive the care, treatment, and support services they need. Although the effects of neglect and of witnessing violence may be less visible than the effects of physical abuse, careful attention must be paid to ensuring that both the physical and emotional needs of these children are met.

**INDIVIDUAL:** Educate caregivers about the harmful impacts of witnessing violence on young children and teach them how to reduce their stress and parent positively.

**COMMUNITY:** Foster community norms that encourage supporting and protecting young children and families. Educate community members about the vulnerability of young children and the detrimental effects of abuse, neglect, and witnessing violence.

**PROVIDERS:** Train all professionals who work with or come in contact with young children to identify children who have witnessed violence or experienced abuse and neglect and to refer affected children to developmentally and culturally appropriate care and support.

**NETWORKS:** Build trust and linkages among community residents and law enforcement officials through community policing and town hall meetings and work with local leaders to encourage reporting of suspected abuse and neglect cases.

**ORGANIZATIONAL:** Increase Child Protective Services’ capacity to provide wrap-around services and to respond to child maltreatment in a timely and appropriate manner.

**POLICY:** Ensure that policy makers are aware of the effects of witnessing violence on young children and the importance of providing funding to address this issue, such as funding for training professionals to work with affected children.

---

**CASE STUDY**

**The Nurse-Family Partnership**

Designed by David Olds, this program improves maternal and child health and reduces child abuse. Trained nurses visit low-income, first-time parents during pregnancy and for the next two years. They promote healthy emotional development, support the parent-child relationship and self-efficacy, screen for depression and substance abuse, provide health advice and referrals, and help with educational goals and employment searches. Outside agencies provide needed services. The program reduced child abuse during a child’s first two years by 79%. Women in the program spent less time on welfare, smoked less, and consumed less alcohol. Participants had one-third as many arrests and their children were half as likely to be delinquent 15 years later. Contact: (866) 864-5226; www.nccfc.org.

**Living in a Non-Violent Community**

LINC combines health care, mental health treatment, and parent, provider, and community education to meet the needs of children affected by domestic violence. The program offers no-cost, long-term treatment for children and families and trains health care, social service, education, daycare, and law enforcement providers to recognize at-risk children and respond effectively. LINC raises awareness about the impact of witnessing violence, helps adults identify, respond to, and support a child witness, and increases feelings of safety and competence. Contact: (415) 885-7636.
Ensuring the health and well-being of young children begins with safeguarding the health of their parents and providing quality primary and preventive care for infants and young children. Good health in childhood promotes positive growth and the development of positive emotional and cognitive skills that in turn contribute to long-term learning and academic success — traits that are highly protective against involvement in violence.

1 INDIVIDUAL: Educate women and their partners about the importance of prenatal care and support them in their efforts to access such care.

2 COMMUNITY: Build public support for increased funding and enrollment in WIC, Medicaid, and Child Health Insurance Programs, especially among cultural or linguistic minority groups.

3 PROVIDERS: Train health providers on the provision of culturally appropriate information and services.

4 NETWORKS: Foster partnerships to advance lead abatement programs for housing, childcare, and playground facilities.

5 ORGANIZATIONAL: Incorporate violence screening and assessment tools into existing healthcare protocols and training and promote their use to increase identification and intervention with pregnant women, caregivers, and young children who are at risk of violence.

6 POLICY: Increase access, affordability, and utilization of prenatal and wellness care by sufficiently funding community health clinics as well as quality home visiting programs.

CASE STUDY

Care “R” Us
This community-based organization in Orange County, California provides a bridge to vital health services for Muslim, Arab, and South Asian communities who may have difficulties accessing health services. Care “R” Us reaches out to families at mosques. State-trained Certified Application Assistants (CAAs) help families fill out CHIP and Medi-Cal applications. The CAAs wear traditional dress and speak Arabic, Urdu, or Pahtoo. Since 1998, over 2,400 children have been enrolled in the Healthy Families and Medi-Cal programs as a result of this program. For more information, call (800) 287-1332.

The Chicago Doula Project
This project trains paraprofessionals from the community (Doulas) to work with pregnant teens during pregnancy, delivery, and after birth. Doulas provide information about breast-feeding and healthy infant development and help mothers develop a positive relationship with their child. Since Doulas are part of the same community as the teen, they have increased credibility and impact. Doula assistance results in lower health care costs, is empowering for mothers, and leads to a better start for babies. Mothers in the project hold and talk to their babies more — resulting in more responsive parenting and child attachment. Contact: Ounce of Prevention Fund at (312) 922-3863 or www.ounceofprevention.org or Chicago Health Connection at (312) 243-4772 or chiconnection@aol.com.
Mental health strategy includes early identification, provision of quality, affordable treatment, and promotion of healthy mental functioning for parents and children. It should also address underlying issues such as substance abuse, unemployment, and violent experiences that trigger or exacerbate mental health problems. As Dr. Bill Carter, Deputy Director of the California Institute for Mental Health, asserts, “We need to re-conceptualize our understanding of mental health. It is not distinct from risk factors like domestic violence, bullying, or substance abuse... Questions about these need to be incorporated into screening materials. A lot of providers don’t want to serve kids this young; they need support and training.”

**CASE STUDY**

**Infant-Family Resource Program**

This National Mental Health Association model program focuses on infants 2 to 4 months old to children 3½ years old who are at risk for psychosocial disorders because of negative maternal perceptions or a mother’s adolescent status. The goals of the program are to provide the best opportunities for infants to grow and develop to their full potential and prevent future psychosocial disorders, as well as to promote positive parent attitudes, strengthen parent-child relationships, and improve maternal self-esteem. The program works to strengthen the bond between mother and infant by conducting home visits and mother-infant group meetings and creating a maternal peer support system for new mothers. Evaluation of program participants at age 2½ years showed they had better psychosocial and cognitive development compared to control groups. For more information, contact the Infant-Family Resource Program at 209 Parran Hall, University of Pittsburgh, 130 DeSoto St., Pittsburgh, PA 15261; (412) 624-3108; first@vms.cis.pitt.edu.

**INDIVIDUAL:** Screen, treat, and support new parents, especially postpartum mothers, suffering from depression. Ensure that caregivers know how to foster resiliency.

**COMMUNITY:** Raise awareness about the effects of postpartum depression and the importance of early detection, referral, and treatment.

**PROVIDERS:** Incorporate education of children’s mental health into existing training and protocols. Train professionals in contact with children to identify signs of mental problems in caregivers and children and on available referral resources.

**NETWORKS:** Collaborate with organizations that provide high-quality, culturally appropriate mental health services for young children and their families.

**ORGANIZATIONAL:** Ensure that caregivers have access to quality mental health services, and incorporate them into services such as well-baby and home health visits, childcare centers, and family support centers.

**POLICY:** Advocate for family mental health policies, including expanding health insurance to include mental health and providing training to ensure quality services and programs.

**RECOMMENDATION 5**

**Promote mental health and meet the mental health needs of all family members.**

FIRST STEPS
Substance abuse during pregnancy can have a lasting impact on development. Substance abusing caregivers are often unable to properly care for their children and support their healthy development. In addition, stressors such as poverty, oppression, deteriorating communities and social networks, and untreated mental illness can interact to exacerbate substance abuse. Reducing alcohol and other drug abuse requires the expansion of quality prevention efforts and treatment services. Further, a substance abuse prevention strategy must address the underlying factors that influence people’s relationship with drugs and alcohol, along with individual children and caregiver needs.

**INDIVIDUAL:** Educate caregivers about the impact of alcohol, nicotine, and other drug use on young children’s physical, social, cognitive, and emotional development, and encourage them to reduce their alcohol intake, seek drug treatment, and stop smoking.

**COMMUNITY:** Encourage local leaders to advocate for alcohol-free community events and fewer alcohol and tobacco outlets and less advertising in their communities.

**PROVIDERS:** Ensure that professionals who work with young children and families are trained to identify substance abusing caregivers and affected children and provide them with developmentally and culturally appropriate care and support.

**NETWORKS:** Establish support groups and networks for substance abusing parents and their young children.

**ORGANIZATIONAL:** Integrate substance abuse prevention, screening, treatment, and support services into existing health, mental health, and social service programs such as community health and family resource centers.

**POLICY:** Expand and improve substance abuse prevention and treatment programs, ensure that families with young children have access to such programs, and invest in better evaluation of services.

**CASE STUDY**

**Dare to Be You**

This primary prevention program, targeting children 2 to 5 years old and their families, significantly lowers the risk of future substance abuse and other high-risk activities by focusing on increasing families’ emotional resiliency and teaching adults how to build strong families. The program improves participants’ self-esteem and communication, problem solving, and family skills. Program participants also include Head Start teachers, day care personnel, and other community members. The Dare to Be You model consists of three components: 1) a family component offering parent, youth, and family training and activities for building self-responsibility, personal and parenting efficacy, problem solving, decision-making, and communication and social skills; 2) a school component consisting of training and supporting child care providers; 3) a community component involving training community members who interact with families. Evaluation of the Dare to Be You program found significant and enduring increases in parental self-esteem and positive parenting attitudes and control techniques, as well as decreases in child blame and harsh punishment. For more information, contact Dare to Be You at (970) 565-3606; darecort@coop.ext.colstate.edu; or www.coopext.colostate.edu.
Quality early childcare and education enhances cognitive, emotional, and social development, especially among low-income preschoolers. Children who experience high-quality, stable childcare engage in more complex play, demonstrate more secure attachments to adults and other children, and score higher on measures of thinking ability and language development, all qualities that increase lifelong social and academic success. According to T. Berry Brazelton and Stanley Greenspan, “In the present setup, less than 10% of infants and toddlers have access to high-quality day care, even though we know that quality child care is essential to the optimal development of children. The rest end up with care that anyone with real options would not trust.”

**CASE STUDY**

**Perry Preschool Project**

Between 1962 and 1967, low-income children (ages 3 and 4) were enrolled in a high-quality preschool program based on the High/Scope approach. The approach emphasized active learning through limiting class size and allowing children to initiate activities and control their environment. Teachers received curriculum training and supervision in social relations, music and movement, language and literacy, and logic and mathematics. The program included weekly home visits by teachers to discuss and practice activities for parents to carry out with their children. Participating children showed significant, long-lasting, positive outcomes. They were more likely to graduate from high school, own a home, and earn more than $2,000 a month, and were less likely to be on welfare or be arrested by age 21. In addition, the lifetime economic benefits to the participants, their families, and the community far exceeded the cost of the program. Net savings of the study were estimated at more than $70,000 per participant in crime-related savings, with a total of $88,000 saved when welfare, tax, and other savings were taken into consideration. For more information, contact High/Scope at 600 North River St., Ypsilanti, MI 48198; (734) 485-2000; info@highscope.org; or www.highscope.org.

**RECOMMENDATION**

Provide affordable, available, and high-quality early care and education.

1. **INDIVIDUAL**: Teach young children the skills needed to support and maintain ‘peaceful’ environments, such as cooperative play, sharing, and age-appropriate conflict resolution.

2. **COMMUNITY**: Build community support for the expansion of high-quality childcare programs, such as Early Head Start, and ensure that these programs reach families most in need.

3. **PROVIDERS**: Train childcare providers to model appropriate behaviors, understand how cultural beliefs influence behavior and socialization, provide consistent discipline, and offer a range of developmentally appropriate activities that support each child’s unique learning style.

4. **NETWORKS**: Promote parental involvement in early education programs and activities.

5. **ORGANIZATIONAL**: Improve the quality of care and reduce staff turnover by putting resources toward facilities renovation, evaluation, staff training, incentives, and benefits.

6. **POLICY**: Increase policy makers’ understanding of the importance of quality childcare and well trained and well paid workers. Advocate for the expansion of state policies such as dependent care tax credits and employer tax credits to fund a living wage, health benefits, and ongoing training and learning opportunities for childcare workers.
Ensuring that a child enters school ready to learn and succeed lays the foundation for academic success, which is protective against violence. School readiness encompasses many aspects of a child’s health and ability. These include: ensuring children’s physical, social, cognitive, and emotional health, and making sure they have financially secure, supported, and engaged parents, well-trained teachers, and access to quality schools and services. Efforts to decrease family poverty are important components, as a small boost in family income is correlated with an increase in children’s social skills and school readiness. Further, as Patricia Van Horn, coordinator of San Francisco Safe Start, notes, “You cannot ignore the emotional readiness part of school readiness.”

**INDIVIDUAL:** Build developmentally appropriate literacy skills in young children, for example, by encouraging caregivers to read to children frequently and providing books that are developmentally, culturally, and linguistically appropriate.

**COMMUNITY:** Build support for and utilization of community resources, such as libraries and adult learning centers, to support early learning, family literacy, and adult education.

**PROVIDERS:** Train providers to support families’ access to and utilization of the quality prenatal care, nutrition, physical activity, and healthcare they need in order to foster healthy brain development and school readiness.

**NETWORKS:** Foster families’ contact with kindergartens prior to young children entering to ease their transition to school.

**ORGANIZATIONAL:** Integrate violence prevention concepts and approaches such as conflict resolution, anger management, and cooperative learning into school readiness programs.

**POLICY:** Support the expansion of literacy programs, such as Even Start, that offer adult education and literacy development along with early childhood and parenting education and ensure that these programs reach the families most in need.

---

**CASE STUDY**

**School Readiness Legislation**

The Connecticut State Legislature unanimously passed a School Readiness Act in 1997, creating a comprehensive system to capture best practices and research-based findings in early care and education. Key components of the system include: 1) evaluation and accreditation of all childcare and preschool programs; 2) accreditation, training, and career support for providers; 3) sliding scale payment mechanisms and round-the-clock, round-the-year care; 4) diagnostic screening, health, and dental care for every child; 5) linkage of family literacy, parent employment, and job training with school readiness and childcare; 6) parent involvement and participation in decision-making; 7) funding for facilities renovation and expansion; and 8) technical assistance for public-private partnerships, fundraising, and community building.

Legislation was also passed to bolster early learning and reading skills through teacher training, early literacy curriculum development, school reading plans and standard setting, early screening and ongoing assessment, parent involvement, and partnerships with AmeriCorps volunteers and school and public libraries.

For more information, visit Connecticut Commission for Children at [www.cga.state.ct.us/coc](http://www.cga.state.ct.us/coc).
Implement measures to reduce young children’s access to guns.

The presence of guns in homes with children and the failure to properly store them puts children at risk for fatal injury. Young children are curious about guns but developmentally unable to comprehend the consequences of using them. Ease of access to firearms threatens children’s safety and survival. In addition, the presence of firearms can escalate the severity of violent incidents if they occur.

**INDIVIDUAL:** Educate parents to inquire about the presence of guns in other people’s homes before they allow their children to visit or play there.

**COMMUNITY:** Encourage safe gun storage in the home, including storing guns unloaded and away from ammunition, out of children’s reach, and in locked boxes.

**PROVIDERS:** Train physicians, home visiting nurses, social workers, and other providers who work with young children and families to ask about the presence of firearms in the home and to educate parents and other caregivers about gun safety locks and safe firearm storage.

**NETWORKS:** Collaborate with local toy stores to stock interesting and engaging non-weapon toys and promote opportunities for creative and stimulating play.

**ORGANIZATIONAL:** Encourage firearm retailers to provide trigger locks with gun purchases.

**POLICY:** Advocate for safe firearm storage, the sale of trigger locks with guns, and a reduction in the total number of weapons available.

CASE STUDY

SAFE KIDS

SAFE KIDS is a nationwide organization dedicated to preventing unintentional childhood injury, including those from firearms. There are currently 300 state and local SAFE KIDS coalitions in all 50 states, the District of Columbia, and Puerto Rico. Through its local coalitions, SAFE KIDS provides discount gun locks and education about firearm safety. The National SAFE KIDS Campaign provides examples of model child access prevention legislation to its local coalitions and state legislators and supports safe storage laws that require gun owners to store guns with a gun lock or in a lock box. For more information, visit www.safekids.org.

Integrating Firearm Safety into Health Programs

The Monterey County Department of Health has integrated safety questions into their health and safety screenings in clinics and home visiting programs. Doctors and nurses are trained to inquire about the presence of firearms and safe storage of weapons in the home. As part of this effort, they convey a message about the risk involved when young children have access to firearms. For more information, contact Monterey County Health Department Main Office, 1270 Natividad Road, Salinas, CA 93906; (831) 755-4500.
Reducing the amount of time children spend watching television and playing video games can make them less aggressive towards their peers\textsuperscript{186} and can increase their academic performance.\textsuperscript{187} At age 5, watching educational programming in place of other programming predicts higher grades in science, math, and language arts in later years.\textsuperscript{188} As noted psychologist Ron Slaby states, “Media can be used to support or promote good behavior or reinforce negative behavior.”\textsuperscript{189}

**CASE STUDY**

**Reducing the Impact of Media Violence**

*Moving Young Children’s Play Away from TV Violence* provides concrete recommendations for reducing the impact of media violence on young children. Developed by the Ready at 5 Partnership and endorsed by the Center for Media Literacy, this guide provides parents, childcare providers, and early childhood educators with practical, hands-on ideas and instructions. The goal is to help children ages 2 to 5 move from violent play stimulated by television viewing to healthy, fun, and safe activities that promote growth and development. The guide provides facts about the effects of media violence on young children, explains about different types of play, and provides activities for different age groups to play creatively and understand the difference between real and make-believe. For more information or to order a copy of the guide, call (800) 228-4630, or visit www.medialit.org.
Children who are routinely teased, bullied, or harassed are at increased risk for social isolation, depression, school failure, low self-esteem, and involvement in violence both as victims and perpetrators. Early bullying behavior may be indicative of underlying factors, and without intervention, the behavior is likely to continue. Socialization into rigid gender codes that associate masculinity with domination and violence often plays a significant role in children’s involvement in bullying, so it is important to address gender socialization in prevention efforts.

**INDIVIDUAL:** Teach children and adults appropriate intervention skills and encourage them to step in whenever they witness bullying, harassment, or teasing.

**COMMUNITY:** Promote community-wide respect for difference and foster a value for diversity, especially among young children and their families.

**PROVIDERS:** Provide teachers and administrators with training that will ensure appropriate and effective counseling and intervention, including how to prevent bullying and enhance communication and conflict resolution skills among children and their families.

**NETWORKS:** Foster partnerships that increase young children’s access to positive male role models, including fathers and father figures. Partner with community organizations and networks to involve boys and young men in activities promoting interpersonal respect and cooperation.

**ORGANIZATIONAL:** Integrate bullying prevention, positive gender socialization, problem solving, assertiveness, sharing, and empathy building skills into existing curricula for young children, and ensure that providers who work with young children are trained to address these issues.

**POLICY:** Develop anti-bullying, harassment, and teasing policies in childcare, early education, and other settings.

**CASE STUDY**

**The Incredible Years**

A curriculum series for parents, teachers, and children, The Incredible Years is designed to promote social competence and prevent, reduce, and treat aggression and conduct problems in young children (ages 2 to 8). The first goal of The Incredible Years series is to provide cost-effective, early prevention programs that families and teachers of young children can use to promote social, emotional, and academic competence, and to prevent children from developing conduct problems. The second goal is to provide interventions for teachers and parents to help treat and reduce conduct problems in young children if they occur. Objectives for parents are to strengthen parent skills through training in positive communication, clear and consistent limit setting, and nonviolent discipline strategies. Objectives for children are to strengthen social and academic competence, reduce behavior problems, and increase positive interactions with peers, teachers, and parents. The Incredible Years programs have been extensively field-tested over the past 18 years. Results indicate that parents and teachers were able to significantly reduce children’s problem behaviors and increase their social competence and academic engagement. These programs have also been shown to be effective for high-risk populations. For more information, visit [www.incredibleyears.com](http://www.incredibleyears.com).
Engaging in creative and stimulating activities helps strengthen children’s cognitive and emotional development and builds interpersonal and communication skills. Play provides an opportunity for young children to interact with and learn from other children and adults, explore strengths, overcome challenges, process information, and practice developmentally appropriate behaviors such as sharing, cooperation, and conflict resolution. Play and creative activities have also been found to be effective in reducing the impact of trauma and in helping children work through their fears and anxieties.

**CASE STUDY**

**Fine Arts for Young Children**

In 1996, the James E. Biggs Center for Early Childhood Education in Northern Kentucky (recognized statewide and nationally for its work in providing “at-risk” 3 and 4 year old children with free, comprehensive education) added a fine arts component to its academic program. As part of its fine arts program, parents write and perform plays, preschoolers write books, learn ballet steps, and see The Nutcracker, and teachers stay after school to sculpt and paint. Biggs receives financial support through grants and local businesses. The Carnegie Theater, located next door, is another essential partner, displaying the children’s artwork and inviting them for plays. Once in kindergarten, many Biggs students score higher than average on 15 measures of school readiness, such as the ability to follow directions and respond appropriately to questions. On average, students who attended Biggs at age 3 outscore non-participants by almost 34\% in nearly every achievement category. For more information, call (859) 292-5895 or visit www.cominguptaller.org.

**Increase children’s opportunities for appropriate play and creative exploration.**

1. **INDIVIDUAL:** Promote play with developmentally appropriate toys and play that models positive gender roles, peaceful ways to resolve conflict, and behaviors such as empathy, sharing, and cooperation.

2. **COMMUNITY:** Develop educational campaigns to encourage caregivers to spend quality time playing with children and encourage young children to communicate and express themselves creatively.

3. **PROVIDERS:** Train providers to incorporate developmentally appropriate play and creative activities into all childcare, education, and family support programs.

4. **NETWORKS:** Partner with parks and recreation departments to ensure safe and developmentally appropriate programs and facilities.

5. **ORGANIZATIONAL:** Develop community resources such as parks, playgrounds, and community centers so that young children have easily accessed play spaces that are safe, secure, and lead-free.

6. **POLICY:** Ensure that all children have access to art, music, sports, and other recreation activities.
Strengthening communities results in stronger, healthier families and children. Strong social networks and connections between community members help foster trust. They also support the development of norms such as peaceful conflict resolution and maintaining safety in communal areas. In addition, increased involvement in decision-making empowers community members to act on behalf of children and families and leads to an increase in physical, informational, and other resources to support healthy child development and functioning.

**INDIVIDUAL:** Build parent leadership skills through training in advocacy, communication, networking, parenting and child development, and becoming change agents.

**COMMUNITY:** Hold community forums and town meetings to identify and discuss issues that are of concern to families and develop strategies to make the community safer for and more supportive of young children and their families.

**PROVIDERS:** Train providers to involve different ethnic groups within a community and make sure that all published materials are culturally and linguistically appropriate.

**NETWORKS:** Engage families and local leaders in decision-making processes by conducting outreach to local businesses, faith communities, law enforcement, advocacy organizations, and other local institutions.

**ORGANIZATIONAL:** Encourage businesses to sponsor community events at which families can meet, build trust and commitment to common causes, and learn about and work with each other.

**POLICY:** Develop, fund, and maintain community resources such as parks, gardens, recreation centers, libraries, playgrounds, parent institutes, and parenting networks to provide children places for safe play and caregivers opportunities to meet, support, and learn from each other.

---

**CASE STUDY**

**Community Partnerships for Healthy Children (CPHC)**

CPHC is a 10-year, $20 million initiative created by Sierra Health Foundation in Sacramento, California to improve the health of children from birth through age 8. It helps communities develop parent-local collaboratives and strategic plans. The movement is built on citizen participation involving local communities, organizations, systems, and political infrastructures, and utilizes asset-based, community-building models of self-assessment. Hundreds of individuals and organizations are involved and working together on a variety of issues, including child abuse and neglect, child care, parenting, school readiness, violence, and child development. CPHC collaboratives develop educational, policy, and advocacy activities and disseminate information through local media. After the first two years of implementation, participants reported many positive community outcomes: 1) 86% saw more opportunities for people to get together with one another; 2) 88% saw more awareness of resources for families in the community; 3) 92% believed that groups concerned with children and family well-being were working together more closely; 4) 69% believed that overall quality of life in the community had improved. Areas with the most positive change were poverty and economic development, dental health, community resources, and preventive health care. For more information, visit www.cphconline.org.

---

**RECOMMENDATION 13**

**Enhance community connections, resources, and access to information & decision-making.**
Services for families and children should be easily accessible and integrated when appropriate. Too often, young children and families in distress end up navigating a complicated and ambiguous web of services and are shuffled from one place to another without receiving the services they need. Service integration addresses the needs of the whole family. Such integration can be supported by joint training. According to Patricia Van Horn, "In-service training of different service providers should be more cross-disciplinary so they can better understand and assist children who have been impacted by violence."\(^{190}\)

**INDIVIDUAL:** Compile information about agencies and organizations that serve children and families, such as location, hours of operation, and cost into a centralized database and make this information available to caregivers.

**COMMUNITY:** Strengthen public support for integrated service delivery for young children and their families.

**PROVIDERS:** Provide training and technical assistance on interdisciplinary collaboration and coordination.

**NETWORKS:** Foster collaboration between city planners, transportation and housing authorities, law enforcement, business leaders, funders, and health and education service providers in the development of neighborhoods and services that promote young children’s health and well-being.

**ORGANIZATIONAL:** Encourage multidisciplinary collaboration and coordinate cross-agency and cross-departmental training and technical assistance to increase knowledge of different practices, approaches, and services.

**POLICY:** Link health, mental health, family support, and other social support services and develop systems and infrastructure to increase communication, information sharing, and collaboration.

### Coordinated Services for Children and Families

Beginning in the early 1990s, Vermont set out to create a ‘culture of prevention’ with an emphasis on the well-being of children and families. A number of public policies supported this goal, including coordination of local services.\(^{191}\) ‘Success by Six’ (collaborations between human service, education, and health care agencies) and ‘Patch’ sites (co-located social services) are among the efforts that support positive outcomes for young children through improved service delivery. ‘Success by Six’ emphasizes personal outreach to families with a new baby. These local, regional, and state collaboratives promote outcomes related to school readiness, health, and academic achievement. In each ‘Patch’ site, teams work together to deliver social services within a small geographic area, better meeting the needs of local children and their families. These efforts represent only part of Vermont’s policy reforms and are indicative of a movement toward an increased emphasis on prevention.

Vermont has increased home visiting services to over 92% of newborns, decreased substantiated child abuse and neglect cases by 60%, increased work and income levels among its welfare caseload, decreased welfare demand and spending, increased child support payments, and decreased teen pregnancies.\(^{192}\) Visit http://earlychildhoodsuccess.org or www.financeproject.org.
Every community has the responsibility to ensure that individual efforts build upon one another and achieve the greatest possible impact. Strategy is the key to maximizing discrete efforts and ensuring that they promote broader system and policy level changes. Key components of strategy development include identifying and prioritizing the needs and assets of a community, engaging and gaining the support of key stakeholders and decision makers, evaluating program effectiveness, fostering sustainability, and ensuring that resources are appropriately used. Strategy development leads to better outcomes for young children and families by promoting approaches that are well coordinated, responsive to local needs and concerns, and more likely to succeed.

**INDIVIDUAL:** Involve caregivers in the strategy development process, both to build their skills and to ensure that outcomes meet the needs of children and their families.

**COMMUNITY:** Ensure that evaluation identifies attributes of successful programs and strengthens ongoing efforts while serving as a tool to build community support for early childhood development and violence prevention efforts.

**PROVIDERS:** Provide appropriate training and technical assistance to ensure a successful strategic development process and significant outcomes.

**NETWORKS:** Integrate violence prevention approaches into existing strategies to foster healthy child development.

**ORGANIZATIONAL:** Ensure that organizations and agencies involved in violence prevention and child and family health develop strategies that address the underlying factors associated with violence.

**POLICY:** Fund violence prevention strategy development and evaluation to ensure that existing and future efforts address local needs, maximize resources and capacity, and achieve the broadest and most significant impact.

---

**CASE STUDY**

**Cultivating Peace in Salinas**

To improve health outcomes for children, youth, and families, the City of Salinas, California joined with the Violent Injury Prevention Coalition and Partners for Peace to launch a strategy development process. With a broader focus than early childhood issues, the resulting framework, *Cultivating Peace in Salinas*, focuses primarily on reducing violence while addressing overall community well-being. The framework is based in local understanding and knowledge of the violence prevention field. To develop the framework, a committed and diverse Core Group, including those working with young children, identified underlying issues and prioritized solutions that had the best chance for success. In addition, there was extensive participation of youth, parents, and an Extended Network who provided information and insight. The framework represents a vision of a culture of caring. The community described this vision as one of compassion, respect, and responsibility. Such a culture recognizes the responsibility of the community to family, and the responsibilities of families and individuals to the community. The framework has served as the basis to steer initiatives and to obtain funding for infrastructure development and service delivery. For a copy of *Cultivating Peace in Salinas: A Violence Prevention Framework*, visit www.preventioninstitute.org. For more information about efforts in Salinas, contact Cultivating Peace at (831) 751-7310. 

---

**RECOMMENDATION**

**Ensure that violence prevention efforts for young children are driven by strategy.**
Current knowledge about the causes of violence and how to prevent it is greater than ever. A high level of violence exists in the U.S., but it is preventable. One important focus must be on young children’s well-being. Too often there is not enough attention paid during children’s early years, only to later discover angry, depressed, alienated, and violent teens and adults. The evidence is overwhelming: the quality of early development and early experiences of violence make a difference in ways that persist far beyond childhood impacting brain development, academic achievement, relationships, and the risk of being involved in violence.

It is becoming increasingly recognized that enhancing early childhood development requires working collaboratively and reducing risks and fostering resiliency in the community, family, and individual. There remains, however, a grave disconnect between what is known and existing policies and practices. FIRST STEPS seeks to address this disconnect by providing information and recommendations to those working with young children and their families. As Dr. Jack Shonkoff states, “How we use the information that we have to influence policy and practice makes a statement about the kind of society we want to live in.” While implementing these recommendations in a meaningful way requires significant investment, research supports the assertion that the investment will pay off in the long-run — for individuals, communities, and society. Clearly, parents and other caregivers have significant responsibility for raising their children; however, they need appropriate resources, services, and support.
The 15 recommendations within FIRST STEPS lay out a policy and practice framework for policy makers, funders, service providers, administrators, parents, and advocates. Each of these groups has a role to play in strengthening efforts for young children and their families, and can use the framework to develop efforts that best respond to their local needs.

- **Policy makers and public officials** can support implementation of the FIRST STEPS recommendations, put training, funding, and program guidelines and requirements into law, and increase attention to the importance of healthy early childhood development and violence prevention through use of the bully pulpit.

- **Funders** can influence priorities and practices through what they choose to fund. They can provide resources for effective programs, ongoing strategy development, training and technical assistance, and evaluation. They can also mount campaigns that build increased public support for programs and laws that support healthy child development and violence prevention.

- **Service providers and administrators** can build the skills of parents and caregivers of young children, develop and participate in appropriate training, and strengthen program delivery. Further, they can increase public understanding of and support for outcomes related to early childhood development and advocate for changes within their own organizations and policy change to support early childhood development and reduce violence. This broad group includes those in direct contact with young children and families such as early care and education providers, health and social service providers, police officers, and judges. It also includes those who have indirect contact such as city planners, parks and recreation administrators, housing authorities, and transportation entities.

- **Parents and advocates** can actively engage with policy makers, funders, and service providers in order to strengthen services and communities that will support young children and prevent violence. They can also become more informed about the relationship between early childhood development and violence prevention and advocate for organizational and policy changes that support families and children.

FIRST STEPS provides the keys for change — for taking steps in the most vulnerable and critically important developmental years to prevent violence. As a society, there is not enough value placed on ensuring that each child has a childhood that is healthy, happy, and nurturing and that paves the way to a successful adulthood. It is both the role and responsibility of adults to protect and nurture children. Ensuring that young children have the supports and opportunities they need is a priority that requires great commitment. The keys are now in our hands. It is up to every one of us to take action.
Caregivers: Person(s) with primary or significant responsibility for caring for and raising a child. The term is used with the understanding that some children are cared for by people other than their parents, including family members and non-family adults. Throughout this report, it is used interchangeably with the term ‘parents.’

Disassociation: Behavior characterized by mistrust, avoidance of people, and reduced ability to empathize and relate to others in meaningful ways.

Early childhood development: Healthy and appropriate physical, cognitive, and emotional development. This is fostered by a range of ‘essential supports,’ including health, nutrition, intellectual stimulation, and opportunities for exploration and active learning, as well as the social and emotional care and nurturing children need in order to realize their human potential and play an active role in their families and communities.¹⁹⁴

Hyper-vigilance: Behavior characterized by hyperactivity, impulsiveness, interpreting non-verbal cues as signs of aggression, and striking out before being struck.

Primary prevention: Efforts designed to prevent violence before it occurs and/or very early in a trajectory of negative outcomes.

Risk factors: Characteristics or circumstances that increase the likelihood of an individual, family, or community being affected by or perpetrating violence.

Resiliency: The capacity to develop positively despite harmful experiences or the presence of risk factors.

Resiliency factors: Traits, characteristics, or circumstances that protect an individual or community from violence. Resiliency factors encourage positive growth and can counter the negative effects of risk factors.

Violence: The “threatened or actual use of physical force or power against another person, against oneself, or against a group or community that results in or has a high likelihood of resulting in injury, death, or deprivation.”¹⁹⁵

Violence prevention: Efforts that build on the strengths and resiliency factors of individuals, families, and communities. These efforts contribute to empowerment, educational and economic progress, and improved life management skills while also fostering healthy communities in which people can grow in dignity and safety. Finally, they realign institutions to be more inclusive and receptive in responding to community needs.¹⁹⁶

Prevention Institute promotes and develops comprehensive prevention solutions. The Institute is a nonprofit organization that develops methods and strategy to strengthen prevention efforts before the onset of a problem. As a national focal point for prevention, the Institute develops and researches effective models and provides strategy consultation, community tools, technical assistance, and training to improve prevention practice. The Institute works with communities, organizations, and government (local, state, and federal) agencies on preventive approaches to problems such as violence, traffic crashes, and chronic disease. All efforts are aimed at changing systems in order to achieve the broadest and most sustained impact. For more information, visit www.preventioninstitute.org.

Action Alliance for Children (AAC) exists to inform, educate, and persuade a statewide constituency of people who work with and on behalf of children by providing the most reliable information on current issues, trends, and public policies that affect children and families in California. AAC is a resource for and facilitates dialogue among diverse community groups, including policy makers, media, children’s service providers and advocates, educators, and parents. AAC publishes the award-winning, bimonthly news magazine, the Children’s Advocate, with a readership of more than 30,000. In addition, AAC has initiated the Building Communication Project, creating opportunities for children’s organizations to interact with the Children’s Advocate and to strengthen the growing movement for children and families. For more information, visit www.4children.org.

Fight Crime: Invest in Kids California is the state office of a national organization composed of over 1,500 sheriffs, police chiefs, district attorneys, and crime survivors. Fight Crime: Invest in Kids California believes that giving children the right start in life through measures such as quality, affordable child care and after-school programs is crucial in preventing and reducing juvenile delinquency and violence. Fight Crime: Invest in Kids California compiles and publicizes research on the effects of children’s programs on crime prevention. The California State Sheriffs Association, California Police Chiefs Association, California Peace Officers Association, California District Attorneys Association, and hundreds of law enforcement professionals have endorsed Fight Crime: Invest in Kids California’s prevention plan. For more information, visit www.fightcrime.org.

196 Definition adapted from SB 752, introduced in the California Senate by Senator Tom Hayden, Feb. 1999.
1. Provide families with services and supports to foster health and empowerment.
2. Recognize poverty as a significant risk factor and take steps to minimize its impact.
3. Prevent and reduce the impact of abuse, neglect, and witnessing violence.
4. Increase wellness opportunities and access to quality healthcare for children and families.
5. Promote mental health and meet the mental health needs of all family members.
6. Reduce substance abuse among caregivers and pregnant women and their partners.
7. Provide affordable, available, and high-quality early care and education.
8. Improve the ability of families, communities, and schools to prepare children for school.
9. Implement measures to reduce young children’s access to guns.
10. Reduce the impact of media violence on young children.
11. Intervene in early bullying behavior and address underlying causes.
12. Increase children’s opportunities for appropriate play and creative exploration.
13. Enhance community connections, resources, and access to information and decision-making.
14. Increase local coordination of services and resources for families and their children.
15. Ensure that violence prevention efforts for young children are driven by effective strategy.

“He shoted her baby at my house. I heard it. I felt sad and scared.”
--- 3 year old

“When I was watching a knife movie, I went to sleep and I woke up. I ran out the room because I was having a nightmare.”
--- 3 year old

“When I was spending the night at my granny’s house, somebody shot somebody, and he was wrapped in blue paper. I was feeling sad.”
--- 4 year old

“Somebody threw a rock at my momma’s window when I was sleeping. It was my bedroom. I felt sad. Then I was crying.”
--- 4 year old

“The younger kids, or younger generation, they follow. They want to follow what you do. They want to do what you do.”
--- 15 year old
